H100 at $3.83 an hour: the GPU and colocation market this week

Weekly GPU rental prices, colocation and power news, and what they mean for infrastructure buyers, every figure sourced and dated.

By the RentServers.com infrastructure desk · Data window October 26, 2026 to November 1, 2026 · rentservers.com/reports/

Market summary

GetDeploying's H100 on-demand median was $3.83 per GPU-hour in the week of October 26, 2026, across 39 providers, up 3.2% from the week before and up 13.3% over four weeks.[1] GetDeploying's B200 on-demand median was $7.99 per GPU-hour in the week of October 26, 2026, across 22 providers, unchanged from the week before and up 17.7% over four weeks.[2]

TrendForce (October 29, 2026): However, TrendForce notes that the new MacBook Pro's premium starting price of US$2,899 for the 14-inch model, coupled with its initial availability alongside existing Mini-LED models, could temper near-term replacement demand.[3]

Xcel Energy rolls out $70B, 5-year capital plan focused on renewables. The spending plan includes 9.2 GW

of renewables and 2.3 GW of storage.[4]

GPU pricing this week

GetDeploying's H100 on-demand median was $3.83 per GPU-hour in the week of October 26, 2026, across 39 providers, up 3.2% from the week before and up 13.3% over four weeks.[1] The H100 12-month reserved median was $3.21 per GPU-hour in the week of October 26, 2026.[5]

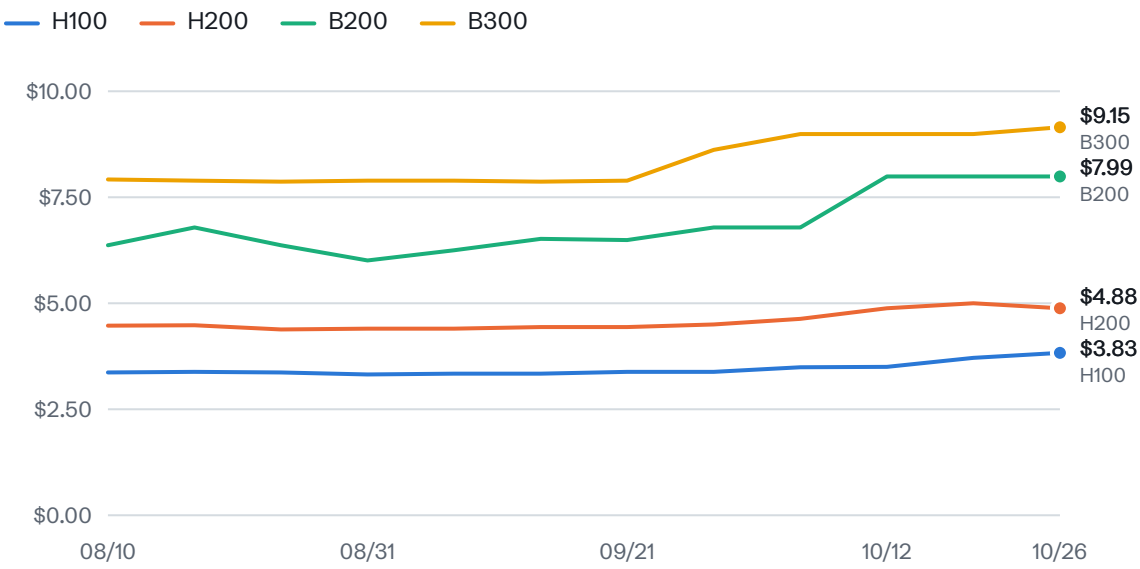

GetDeploying's H200 on-demand median was $4.88 per GPU-hour in the week of October 26, 2026, across 35 providers, down 2.4% from the week before and up 8.4% over four weeks.[6] The H200 12-month reserved median was $3.68 per GPU-hour in the week of October 26, 2026.[7]

GetDeploying's B200 on-demand median was $7.99 per GPU-hour in the week of October 26, 2026, across 22 providers, unchanged from the week before and up 17.7% over four weeks.[2] The B200 12-month reserved median was $8.44 per GPU-hour in the week of October 26, 2026.[8]

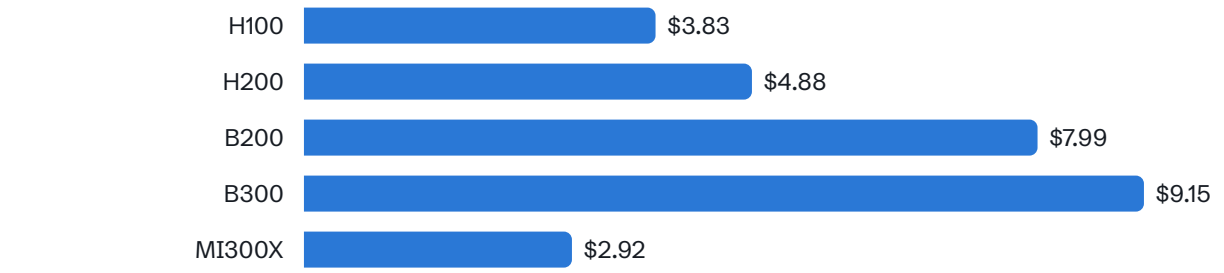

GetDeploying's B300 on-demand median was $9.15 per GPU-hour in the week of October 26, 2026, across 17 providers, up 1.8% from the week before and up 6.1% over four weeks.[9] The B300 12-month reserved median was $6.00 per GPU-hour in the week of October 26, 2026.[10]

GetDeploying's MI300X on-demand median was $2.92 per GPU-hour in the week of October 26, 2026, across 6 providers, down 33.9% from the week before and down 33.8% over four weeks.[11] The MI300X 12-month reserved median was $2.23 per GPU-hour in the week of October 26, 2026.[12]

As a second source: Price of Compute's on-demand median for H100 SXM was $3.99 per GPU-hour on November 2, 2026, across 9 providers.[13] Price of Compute's on-demand median for H200 SXM was $6.28 per GPU-hour on November 2, 2026, across 3 providers.[14] Price of Compute's on-demand median for B200 was $8.60 per GPU-hour on November 2, 2026, across 5 providers.[15] Price of Compute's on-demand median for B300 was $6.60 per GPU-hour on November 2, 2026, across 3 providers.[16]

Colocation and power

Xcel Energy rolls out $70B, 5-year capital plan focused on renewables. The spending plan includes 9.2 GW of renewables and 2.3 GW of storage.[4]

AEP increases investment plan 30% on generation, transmission spending. American Electric Power's contracted large loads jumped 22%, to 84 GW, mainly on a 10.4-GW data center in Ohio being developed by

SB Energy, company officials said Wednesday.[17]

Chinese-linked solar developer loses appeal over Texas grid interconnection. Court of Appeals for the 5th Circuit said Texas has a “free lane” to enforce restrictions on foreign-owned companies’ access to the state’s electric grid in a ruling that could have implications for other states and market participants.[18]

Deals and announcements

What could 1,000x more reliable quantum computation unlock?[19]

Beyond the grid: the maintenance challenges putting the data center boom at risk.[20]

Sponsored: One security strategy. Four different data center realities.[21]

Europe’s AI ambitions are hitting a power bottleneck.[22]

Data center mooted in Glasgow by Scottish automotive firm.[23]

Modular data center provider DXN loses neocloud customer contract.[24]

What it means for buyers

My take: rental prices are still moving up, so if you have a renewal or a new cluster in the next quarter, get counter-quotes now and ask for multi-year terms with a price lock.[1]

My take: memory and flash costs feed straight into server and GPU node prices. Budget for higher hardware quotes into next year.[3]

My take: power, not floor space, sets colocation timelines. Ask every facility for the energized date and committed kW per rack in writing.[4]

Get counter-quotes

Make 3+ providers bid for your servers. Send your spec, invoice or renewal notice and get three or more quotes normalized into one 36-month cost within one business day. Suppliers see your name and company only after you consent to registration.

Get counter-quotes or call (312) 313-3883.
